

## ADVANTAGES OVER STANDARD, ACTIVE METAL DETECTORS.

### ZERO RADIATION

*Passive Scanning Technology™* absolutely no radiation. Simply put, this means there is no potential for cancer and other inherent health risks associated with radiation.

### AFFORDABILITY

The *Passive Portal™* has significantly lower up-front cost, is energy efficient, and is much less expensive than even the basic active metal detector alternatives.

### PORTABILITY

**Weighing in at under 30 lbs, the *Passive Portal* is the most portable full-body security screening system on the market. This allows the unit to easily be moved by one staff/security member (i.e. outside a classroom or at an event/sport).**

### FREQUENCY & EASE OF USE

The *Passive Portal™* can scan up to 250 people in under 5 minutes. This is under 1.2 seconds per scan! With Bluetooth connection to the included interactive tablet, the potential threat is approximated to a specific area of the body—dramatically speeding the threat assessment process. For efficient entryway screening, only 1-2 staff/ security members are required to operate and assess potential threats.

### ACCURACY

Our extensive, in-house testing shows a near 99% threat detection accuracy. The same sensing technology found in the *Passive Portal™* is also used in today's state-of-the-art, military detection devices.

*Passive Security Scan, PSSI, Passive Scanning Technology, Passive Portal, and Passive Wand* are unregistered trademarks of Passive Security Scan, Inc., a subsidiary of Defense Technologies International Corp.

"I am sure many of you have done childhood experiments, using a bar magnet placed under a piece of paper, and then sprinkled iron filings on top of the paper. Remember the almost bubble-like lines that appeared that were produced by the poles of the magnet. These lines also exist on earth, which can be thought of as a very large magnet. Now, consider these magnetic lines around the earth as a fog. We are tuned to this fog, and any item that is surrounded by its own magnetic field, like a firearm, will produce a hole in this fog. This is what we detect. The holes in the fog."

**-EXCERPT: INVENTOR, R. FLUCK**

The *Passive Portal™* is a next-generation, walk-through personnel screening system. Utilizing our patented Passive Scanning Technology™ (US Patent 7408461), the *Passive Portal™* non-invasively detects weapons and contraband by reading subtle changes in the Earth's magnetic field.
